

Measles, Hagelloch, Germany, 1861

Overview

This dataset documents a measles outbreak in the village of Hagelloch, Germany, in 1861. The detailed records include individual-level data on 188 cases with dates of prodrome and rash onset, spatial locations, family and school class membership, and identified infectors — making it one of the earliest and most complete outbreak datasets available.

Data

The dataset contains 188 rows and 12 columns:

- case_ID: unique case identifier
- infector: case ID of the infector
- date_of_prodrome: date of prodromal symptoms
- date_of_rash: date of rash onset
- date_of_death: date of death (if applicable)
- age: age of the individual
- gender: gender
- family_ID: family identifier
- class: school class
- complications: complications recorded
- x_loc: x coordinate of household location
- y_loc: y coordinate of household location
