

MERS-CoV, South Korea, 2015

Overview

This dataset describes the 2015 outbreak of Middle East Respiratory Syndrome Coronavirus (MERS-CoV) in South Korea. The outbreak was the largest outside the Middle East, driven by nosocomial transmission in healthcare facilities. The data include a linelist of cases and a contact network linking transmission pairs.

Source

European Centre for Disease Prevention and Control (ECDC).

Data

The dataset is returned as a `NamedTuple` with two `DataFrames`:

- `linelist` (cases): `id`, `age`, `age_class`, `sex`, `place_infect`, `reporting_ctry`, `loc_hosp`, `dt_onset`, `dt_report`, `week_report`, `dt_start_exp`, `dt_end_exp`, `dt_diag`, `outcome`, `dt_death`
- `contacts` (transmission pairs): `from`, `to`, `exposure`, `diff_dt_onset`

```
using Outbreaks
using DataFrames
data = Outbreaks.mers_korea_2015()
linelist = data.linelist
contacts = data.contacts
```
