

Dog Rabies, Central African Republic, 2003–2012

Overview

This dataset documents dog rabies cases in the Central African Republic from 2003 to 2012. It includes a linelist of confirmed cases with geographic coordinates, and associated DNA sequence data for phylogenetic analysis of rabies virus strains.

Source

Institut Pasteur de Bangui; WHO Collaborating Centre for Rabies.

Data

The dataset is returned as a `NamedTuple` with two components:

- `linelist`: index, date, latitude, longitude, `has_dna`
- `dna`: DNA sequences as a `DataFrame`

```
using Outbreaks
using DataFrames
data = Outbreaks.rabies_car_2003()
linelist = data.linelist
dna = data.dna
```

```
└ Warning: thread = 1 warning: parsed expected 1 columns, but didn't reach end of line around data ro
